

This document gives directions to install Debian with a XFS root filesystem.

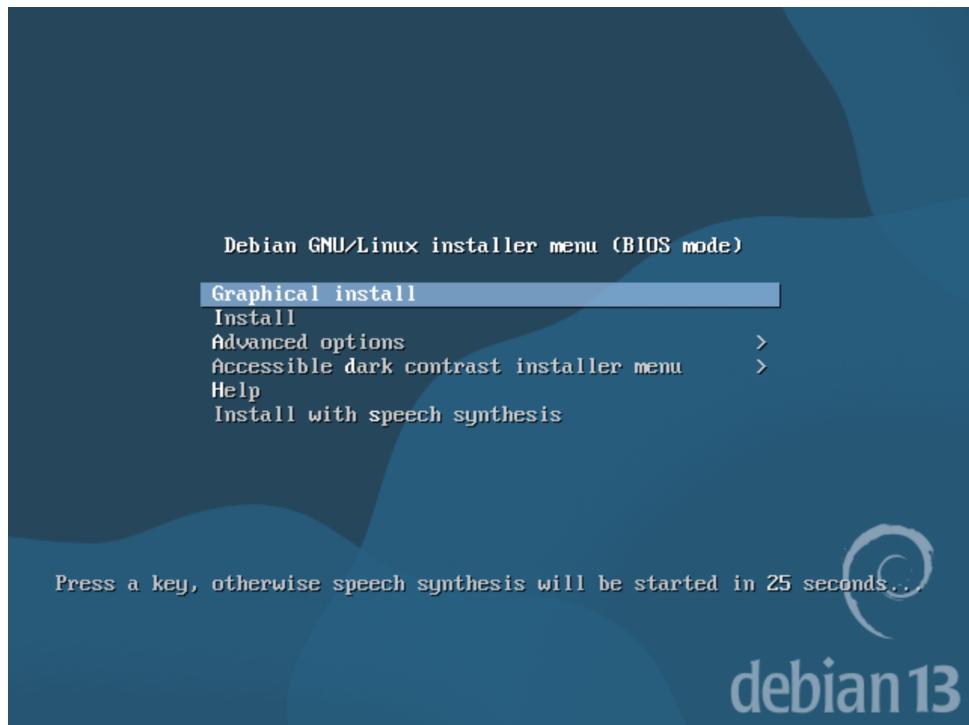

Figure 1: Start by Graphical install

The prompt will then ask you to configure the language, location, keyboard, network and users. Proceed.

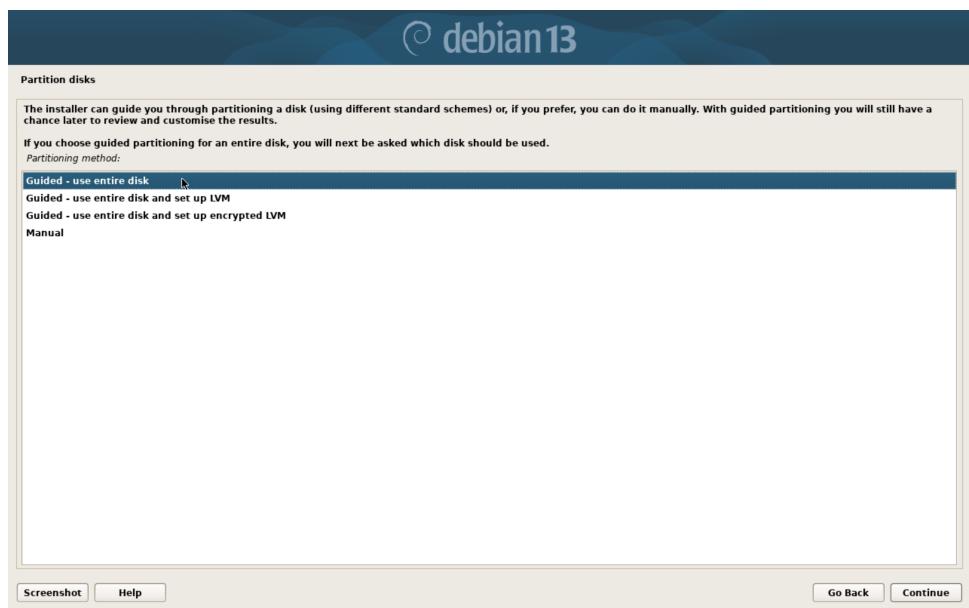

Figure 2: In the partition disks section, select Guided - use entire disk

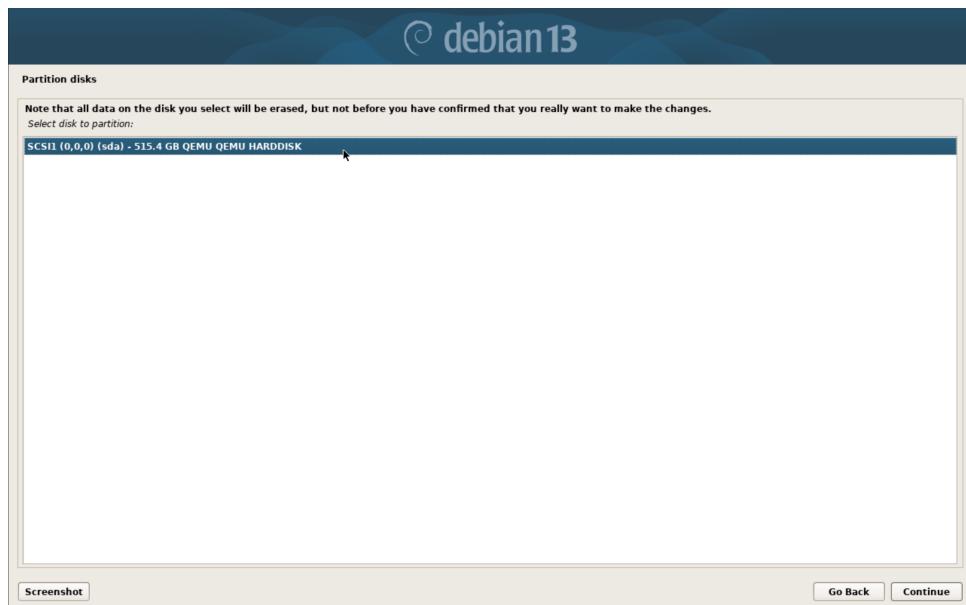

Figure 3: Pick the drive you want to partition

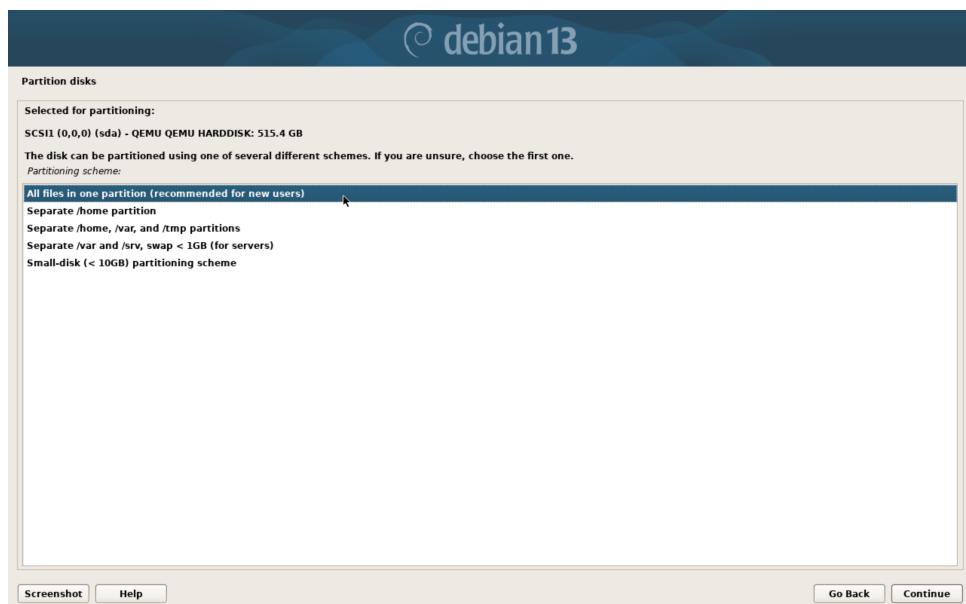

Figure 4: Select All files in one partition

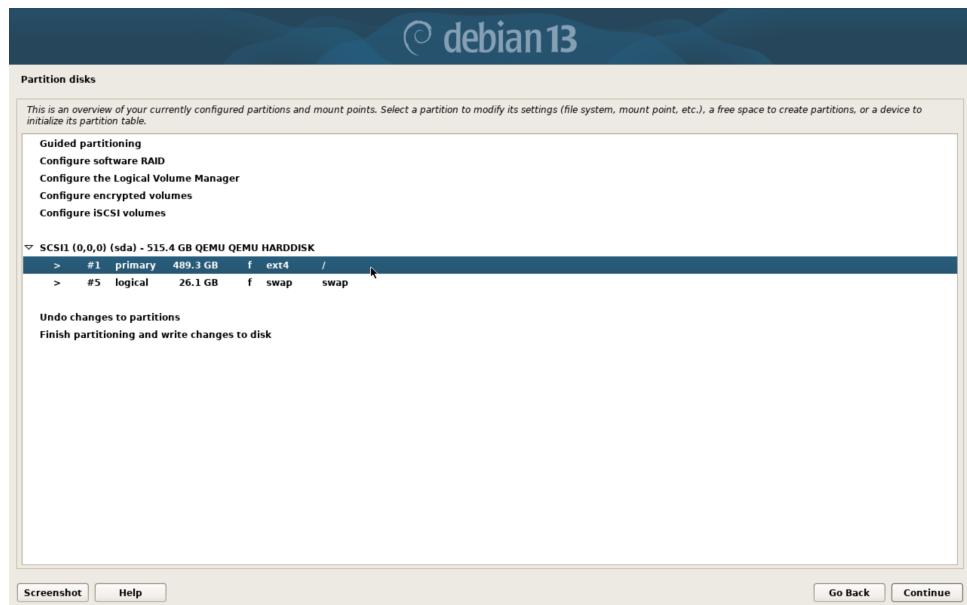

Figure 5: Double-click on the ext4 partition

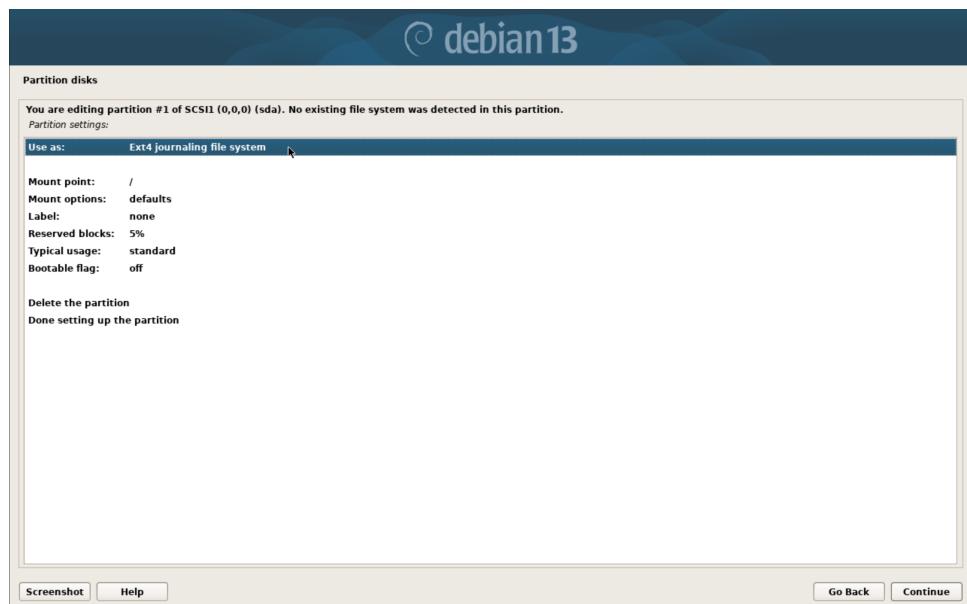

Figure 6: Change the Use as section

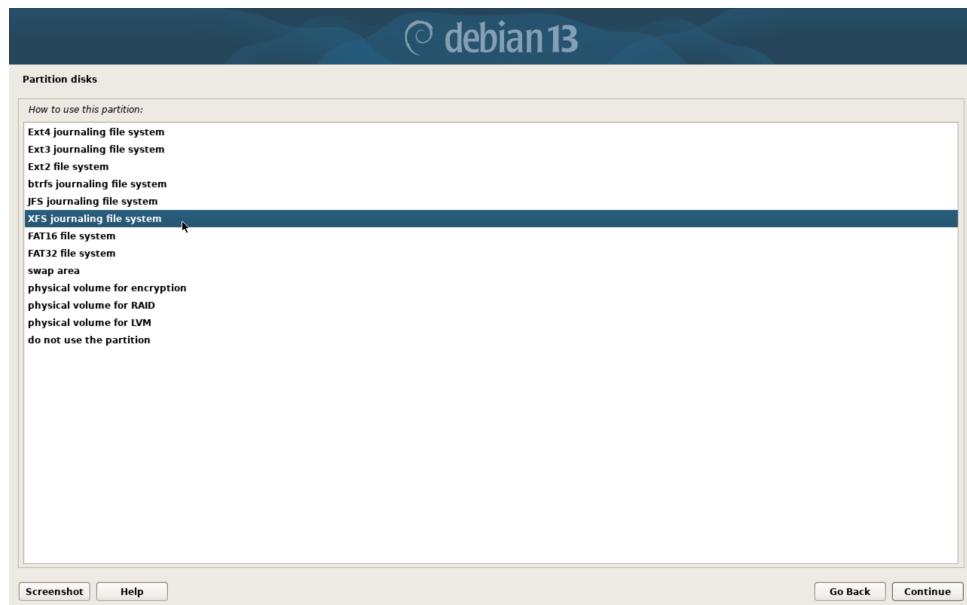

Figure 7: Pick XFS journaling file system

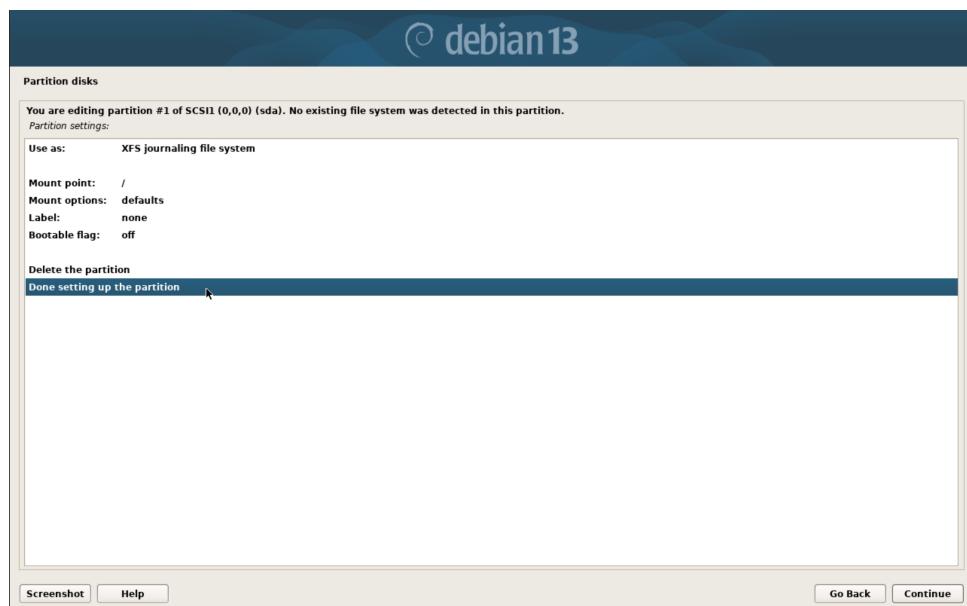

Figure 8: Confirm by clicking on Done setting up the partition

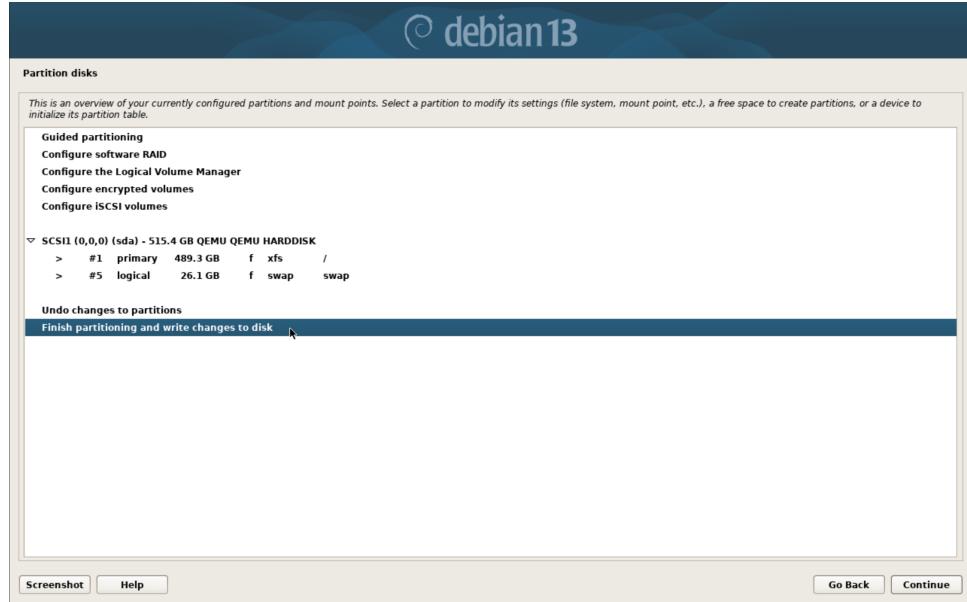

Figure 9: Confirm by clicking on Finish partitioning and write changes to disk

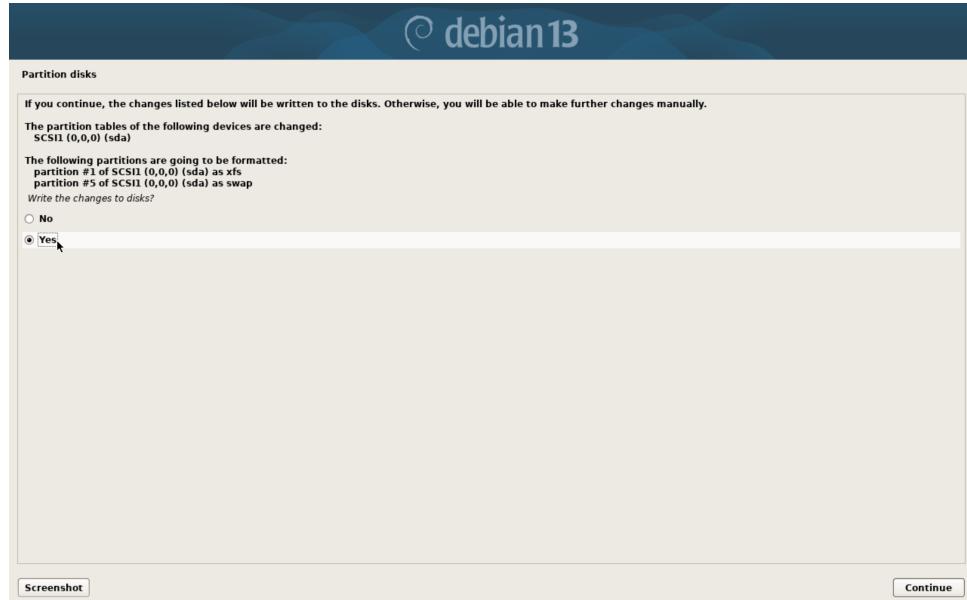

Figure 10: Write the changes to the disk. You can proceed with the rest of the installation and boot the newly installed Debian.
